

## Setting Custom Headers

Description: Write a Python program that makes a GET request to <https://httpbin.org/headers> with a custom header X-Test-Header: TestValue. Parse the response and print the value of X-Test-Header that was received by the server. Use the socket module to solve this problem.

Input: None.

Output (without unit test): The value of X-Test-Header sent to the server.

Output (with unit test):

```
connect called with: call(('httpbin.org', 80))
send called with: call(b'GET /headers HTTP/1.1\r\nHost:
httpbin.org\r\nX-Test-Header: TestValue\r\nConnection:
close\r\n\r\n')
recv called with: call(4096)
test attribute passed: TestValue is equal to TestValue
```
