Error Handling (http.client)

Description: Write a Python script to request jsonplaceholder.typicode.com/invalidurl. If the request fails (HTTP status code 404), print "Request Failed". Use http.client module to connect to the server.

Input: None.

Output (without unit test): A message indicating whether the request failed.

Output (with unit test):

connection called with: call('jsonplaceholder.typicode.com')
request called with: call('GET', '/invalidurl')
connection closed: call()
test attribute passed: Request Failed is equal to Request Failed
connection called with: call('jsonplaceholder.typicode.com')
request called with: call('GET', '/invalidurl')
connection closed: call()
test attribute passed: Request Succeeded is equal to Request Succeeded
