Simple GET Request (http.client)

Description: Write a Python program that performs a GET request to jsonplaceholder.typicode.com/posts/1 and prints the title of the post. Use the http.client module to connect to the server.

Input: None.

Output (without unit test): The title of the post.

Output (with unit test):

```
connection called with: call('jsonplaceholder.typicode.com')
request called with: call('GET', '/posts/1')
read called: b'{"title": "Sample Title"}'
test attribute passed: Sample Title is equal to Sample Title
```
